

No surgery. No injections. No downtime.

Knock out cellulite in a single round

Thermage joins the fight against cellulite

Other non-invasive treatments for cellulite require multiple treatments to improve the appearance of dimpling. Not Thermage. In only one treatment, patients have reported smoothing of dimples on thighs and buttocks with lasting results. Low start-up costs and reduced treatment time means Thermage can quickly become one of your most profitable non-invasive procedures.

Model

FDA cleared for the treatment of cellulite*

Before Thermage

6 Months Post Treatment

Single treatment by Silvia Cuevas, M.D.

"The improvements in this patient have been and continue to be impressive. She also decided to have the *Face by Thermage™* procedure because of the results she saw with the cellulite treatment."

- Silvia Cuevas, M.D.

All Before and After photos are un-retouched and represent patients who have had significant results. Results vary depending on age and skin condition.

*FDA cleared for the temporary improvement in the appearance of cellulite.

Introducing the *Cellulite* procedure by Thermage and New ThermoTip™ CL

The advanced **deep heating** ThermoTip CL from Thermage helps improve the appearance of cellulite by:

- Restoring collagen connective tissue and equilibrating fibrous septae elasticity to improve the smooth appearance of the skin surface.
- Improving circulation and metabolism in cellulite prone tissues to reduce fluid and improve the appearance of cellulite.

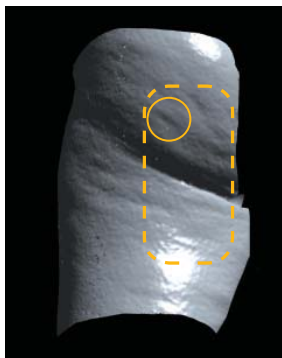

Patients who have been dissatisfied with other cellulite treatments will benefit from...

- Smoothing of dimples and improved skin texture
- A single treatment with lasting results
- No surgery or injections and little to no downtime

Practices adding the *Cellulite* procedure to their treatments can expect...

- Increased hourly profitability
- Lower start-up costs when compared to other systems
- Proven technology and excellent practice support

Before Thermage

4 Months Post Treatment

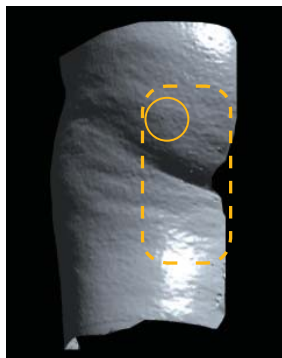

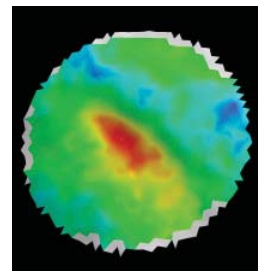

Figure 1 Advanced 3-D textural photo imaging demonstrating the Thermage cellulite treatment efficacy. Dashed rectangle indicates treated area. Circle indicates analyzed area.

Before Thermage

4 Months Post Treatment

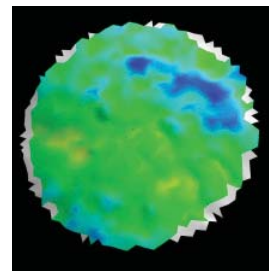

Figure 2 A thermograph of the circled region in Figure 1 shows depth (in mm) difference to 'perfect' or calculated smooth surface (pre and post).

Thermage conducted clinical studies for 21 months to develop the optimal treatment tip parameters and procedure guidelines for cellulite. These images are courtesy of Dr. James Koch, a Plastic Surgeon leading the Thermage Hayward, CA clinical evaluations.

Nearly 90% of women experience some degree of cellulite¹
